

Aria is a private AI workspace and second brain application.
It was created as a Chief of Staff tool for personal productivity.
The main features include project management, knowledge base with RAG,
web research with citations, a memory system, and report generation.
The technology stack uses Next.js 14, Supabase with pgvector,
and supports multiple AI providers including OpenAI, Anthropic, and Google.
The embedding dimension is 1536, matching OpenAI text-embedding-3-small.
Documents are stored in a private Supabase Storage bucket.
Row Level Security ensures each user can only see their own data.
The admin portal shows sanitized error logs and user feedback.
